

EASILY ADJUSTABLE CARDS MULTIPLE APPLICATIONS

TV19 VERSATILE

TV19 VersaTiles™ are designed with the same low leakage patented ceramic as T40™ probe cards, but at an average size of 28mm x 28mm with a 19mm diameter ceramic, they're easy to use in a wide variety of testing situations.

The probe cards can be mounted with a variety of brackets, or by using one of several different VersAdjust™ plates, in either single or multi-site configurations. Single TV19 probe cards can be mounted on positioner arms or 4.5"-compatible plates; up to 17 VersaTiles™ can be configured on a 300mm VersAdjust™ plate. Once cards are set up, micro-adjustments can be made easily and quickly.

TV19 VersaTiles™ are optimized for a variety of tests, including low leakage, high temperature, and cryo testing.
